ELECTRONIC ENGINEERING

Fundamentals of Radar Signal Processing

- ✔ State-of-the-art Fourier analysis techniques
- ✔ Target and interference models
- ✔ Synthetic aperture imaging
- ✔ Adaptive array processing

Mark A. Richards, Ph.D.

Chapter 1. Introduction to Radar Systems 1

1.1 History and Applications of Radar 1
1.2 Basic Radar Functions 3
1.3 Elements of a Pulsed Radar 6
1.3.1 Transmitter and waveform generator 7
1.3.2 Antennas 10
1.3.3 Receivers 16
1.4 Review of Selected Signal Processing Concepts and Operations 21
1.4.1 Resolution 21
1.4.2 Spatial frequency 23
1.4.3 Fourier transforms 24
1.4.4 The sampling theorem and spectrum replication 27
1.4.5 Vector representation of signals 32
1.4.6 Data integration 33
1.4.7 Correlation 35
1.5 A Preview of Basic Radar Signal Processing 37
1.5.1 Radar time scales 39
1.5.2 Phenomenology 40
1.5.3 Signal conditioning and interference suppression 41
1.5.4 Imaging 45
1.5.5 Detection 47
1.5.6 Postprocessing 49
1.6 Radar Literature 49
1.6.1 Radar systems and components 50
1.6.2 Radar signal processing 50
1.6.3 Advanced radar signal processing 50
1.6.4 Current radar research 51
References 51

Chapter 2. Signal Models 53

2.1 Components of a Radar Signal 53
2.2 Amplitude Models 54

2.2.1 Simple point target radar range equation 54
2.2.2 Distributed target forms of the range equation 57
2.2.3 Radar cross section 64
2.2.4 Radar cross section for meteorological targets 66
2.2.5 Statistical description of radar cross section 67
2.2.6 Swerling models 79
2.3 Clutter 82
2.3.1 Behavior of σ^0 83
2.3.2 Signal-to-clutter ratio 84
2.3.3 Temporal and spatial correlation of clutter 85
2.3.4 Compound models of radar cross section 86
2.4 Noise Model and Signal-to-Noise Ratio 88
2.5 Jamming 92
2.6 Frequency Models: The Doppler Shift 92
2.6.1 Doppler shift 92
2.6.2 Simplified approach to Doppler shift 95
2.6.3 The "stop-and-hop" assumption and spatial Doppler 97
2.7 Spatial Models 100
2.7.1 Variation with angle or cross-range 103
2.7.2 Variation with range 106
2.7.3 Projections 107
2.7.4 Multipath 108
2.8 Spectral Model 109
2.9 Summary 111
References 112

Chapter 3. Sampling and Quantization of Pulsed Radar Signals 115

3.1 Domains and Criteria for Sampling Radar Signals 115
3.1.1 Time and frequency samples 116
3.1.2 Spatial samples 118
3.1.3 Sampling criteria 119
3.2 Sampling in the Fast Time Dimension 121
3.3 Sampling in Slow Time: Selecting the Pulse Repetition Interval 123
3.4 Sampling the Doppler Spectrum 128
3.4.1 The Nyquist rate in Doppler 129
3.4.2 Straddle loss 131
3.5 Sampling in the Spatial and Angle Dimensions 136
3.5.1 Phased array element spacing 137
3.5.2 Antenna beam spacing 138
3.6 Quantization 140
3.7 I/Q Imbalance and Digital I/Q 145
3.7.1 I/Q imbalance and offset 145
3.7.2 Correcting I/Q errors 149
3.7.3 Digital I/Q 152
References 157

Chapter 4. Radar Waveforms 159

4.1 Introduction 159
4.2 The Waveform Matched Filter 161
4.2.1 The matched filter 161

4.2.2 Matched filter for the simple pulse 163
4.2.3 All-range matched filtering 165
4.2.4 Range resolution of the matched filter 166
4.3 Matched Filtering of Moving Targets 167
4.4 The Ambiguity Function 169
4.4.1 Definition and properties of the ambiguity function 169
4.4.2 Ambiguity function of the simple pulse 173
4.5 The Pulse Burst Waveform 176
4.5.1 Matched filter for the pulse burst waveform 177
4.5.2 Pulse-by-pulse processing 178
4.5.3 Range ambiguity 180
4.5.4 Doppler response of the pulse burst waveform 181
4.5.5 Ambiguity function for the pulse burst waveform 183
4.5.6 Relation of slow-time spectrum to ambiguity function 187
4.6 Frequency-Modulated Pulse Compression Waveforms 188
4.6.1 Linear frequency modulation 188
4.6.2 The principle of stationary phase 192
4.6.3 Ambiguity function of the LFM waveform 194
4.6.4 Range-Doppler coupling 197
4.6.5 Stretch processing 198
4.7 Range Side Lobe Control for FM Waveforms 201
4.7.1 Matched filter frequency response shaping 202
4.7.2 Waveform spectrum shaping 204
4.8 The Stepped Frequency Waveform 206
4.9 Phase-Modulated Pulse Compression Waveforms 211
4.9.1 Biphase codes 212
4.9.2 Polyphase codes 218
4.10 Costas Frequency Codes 222
References 223

Chapter 5. Doppler Processing 225

5.1 Alternate Forms of the Doppler Spectrum 226
5.2 Moving Target Indication (MTI) 228
5.2.1 Pulse cancellers 230
5.2.2 Vector formulation of the matched filter 234
5.2.3 Matched filters for clutter suppression 235
5.2.4 Blind speeds and staggered PRFs 239
5.2.5 MTI figures of merit 244
5.2.6 Limitations to MTI performance 251
5.3 Pulse Doppler Processing 253
5.3.1 The discrete time Fourier transform of a moving target 255
5.3.2 Sampling the DTFT: the discrete Fourier transform 258
5.3.3 Matched filter and filterbank interpretations of pulse Doppler processing with the DFT 261
5.3.4 Fine Doppler estimation 264
5.3.5 Modern spectral estimation in pulse Doppler processing 270
5.3.6 Dwell-to-dwell stagger 272
5.4 Pulse Pair Processing 273
5.5 Additional Doppler Processing Issues 279
5.5.1 Combined MTI and pulse Doppler processing 279
5.5.2 Transient effects 279
5.5.3 PRF Regimes and Ambiguity Resolution 280

5.6 Clutter Mapping and the Moving Target Detector 284
5.6.1 Clutter mapping 284
5.6.2 The moving target detector 286
5.7 MTI for Moving Plateforms: Adaptive Displaced Phase Center Antenna Processing 287
5.7.1 The DPCA concept 287
5.7.2 Adaptive DPCA 289
References 293

Chapter 6. Detection Fundamentals 295

6.1 Radar Detection as Hypothesis Testing 296
6.1.1 The Neyman-Pearson detection rule 297
6.1.2 The likelihood ratio test 298
6.2 Threshold Detection in Coherent Systems 308
6.2.1 The Gaussian case for coherent receivers 308
6.2.2 Unknown parameters and threshold detection 312
6.2.3 Linear and square-law detectors 319
6.2.4 Other unknown parameters 319
6.3 Threshold Detection of Radar Signals 321
6.3.1 Coherent, noncoherent, and binary integration 322
6.3.2 Nonfluctuating targets 324
6.3.3 Albersheim's equation 329
6.3.4 Fluctuating targets 331
6.3.5 Shnidman's equation 336
6.4 Binary Integration 338
6.5 Useful Numerical Approximations 342
6.5.1 Approximations to the error function 342
6.5.2 Approximations to the magnitude function 344
References 345

Chapter 7. Constant False Alarm Rate (CFAR) Detection 347

7.1 The Effect of Unknown Interference Power on False Alarm Probability 347
7.2 Cell-Averaging CFAR 349
7.2.1 The effect of varying P_{FA} 349
7.2.2 The cell-averaging CFAR concept 350
7.2.3 CFAR reference windows 352
7.3 Analysis of Cell-Averaging CFAR 353
7.3.1 Derivation of CA CFAR threshold 353
7.3.2 Cell-averaging CFAR performance 354
7.3.3 CFAR loss 357
7.4 CA CFAR Limitations 358
7.4.1 Target masking 359
7.4.2 Clutter edges 363
7.5 Extensions to Cell-Averaging CFAR 364
7.6 Order Statistic CFAR 370
7.7 Additional CFAR Topics 374
7.7.1 Adaptive CFAR 374
7.7.2 Two-parameter CFAR 375
7.7.3 Clutter map CFAR 377
7.7.4 Distribution-free CFAR 379
7.7.5 System-level control of false alarms 381
References 382

Chapter 8. Introduction to Synthetic Aperture Imaging 385

8.1 Introduction to SAR Fundamentals 390
8.1.1 Cross-range resolution in radar 390
8.1.2 The synthetic aperture viewpoint 392
8.1.3 Doppler viewpoint 399
8.1.4 SAR coverage and sampling 401
8.2 Stripmap SAR Data Characteristics 404
8.2.1 Stripmap SAR Geometry 404
8.2.2 Stripmap SAR data set 407
8.3 Stripmap SAR Image Formation Algorithms 410
8.3.1 Doppler beam sharpening 411
8.3.2 Quadratic phase error effects 416
8.3.3 Range-Doppler algorithms 421
8.3.4 Depth of focus 426
8.4 Spotlight SAR Data Characteristics 428
8.5 The Polar Format Image Formation Algorithm for Spotlight SAR 433
8.6 Interferometric SAR 436
8.6.1 The effect of height on a SAR image 436
8.6.2 IFSAR processing steps 439
8.7 Other Considerations 444
8.7.1 Motion compensation and autofocus 444
8.7.2 Autofocus 447
8.7.3 Speckle reduction 455
References 458

Chapter 9. Introduction to Beamforming and Space-Time Adaptive Processing 461

9.1 Spatial Filtering 461
9.1.1 Conventional beamforming 461
9.1.2 Adaptive beamforming 465
9.1.3 Adaptive beamforming with preprocessing 469
9.2 Space-Time Signal Environment 471
9.3 Space-Time Signal Modeling 475
9.4 Processing the Space-Time Signal 479
9.4.1 Optimum matched filtering 479
9.4.2 STAP metrics 480
9.4.3 Relation to displaced phase center antenna processing 484
9.4.4 Adaptive matched filtering 488
9.5 Computational Issues in STAP 491
9.5.1 Power domain solution 492
9.5.2 Computational load of the power domain solution 493
9.5.3 Voltage domain solution and computational load 495
9.5.4 Conversion to computational rates 496
9.6 Reduced-Dimension STAP 497
9.7 Advanced STAP Algorithms and Analysis 499
9.8 Limitations to STAP 501
References 502
